

Dear Hiring Manager,

I am a Senior Magento 2 / Adobe Commerce Developer with over 12 years of experience delivering scalable, high-performance eCommerce solutions for enterprise and mid-market clients. I specialize in Magento 2 (Adobe Commerce Cloud), backend architecture, and complex system integrations.

Currently, I work as an Associate Staff Engineer at Nagarro, where I lead Magento 2 Enterprise development and integrations for global clients. My work includes designing custom Magento modules, REST APIs, and real-time integrations with SAP using Boomi and direct API connections. These solutions support large-scale B2B and B2C platforms with multi-store, multi-currency, and high-traffic requirements.

I have hands-on experience with Adobe Commerce Cloud environments, Magento upgrades, performance optimization, and production support. I regularly collaborate with Adobe support teams during version upgrades and live issue resolution. I am also an Adobe Certified Professional – Adobe Commerce Developer, ensuring adherence to best practices and platform standards.

In addition to Magento, I bring strong backend experience with Node.js and Express.js, where I have built microservices for product configuration, reporting, and third-party integrations. My technical skill set includes MySQL, Redis, ElasticSearch, MongoDB, Docker, AWS, CI/CD pipelines, and modern DevOps workflows.

I am comfortable working with distributed teams across time zones and have extensive experience owning features end-to-end—from architecture and development to deployment and post-release support. I value clean code, performance, and maintainable solutions that align with business goals.

I would welcome the opportunity to discuss how my Magento and integration expertise can contribute to your eCommerce initiatives.

Kind regards,

Prince Yadav

Senior Magento 2 / Adobe Commerce Developer
